Add-on products Add-on products, such as the free Autodesk Mockingbird, provide functionality that adds power to AutoCAD without cost. For instance, Mockingbird imports drawings from other CAD formats (which can be created by AutoCAD) to AutoCAD. Other examples include the capability of creating animation of the model through CINEMA 4D in separate files, converting a drawing created by another CAD application into an object in the same project, and 3D visualization software using the Dynamic studio. In 2019, Autodesk announced a licensing change to include software for partners and freelancers, called Freeform. Users can download and use Autodesk Freeform on any one computer. Freeform includes the Mockingbird

product, along with full access to the Autodesk Exchange Store and Autodesk Account, which allows users to purchase additional software. Trademark disputes Autodesk's trademarks include "Autodesk", "AutoCAD" and "AutoCAD LT". All of the company's registered trademarks are held by the company. Other names or numbers may be registered trademarks, but the company does not own any trademarks that include the term "AutoCAD". The registered mark "AutoCAD" was originally for architectural CAD but was extended to CAD software. Autodesk's "AutoCAD LT" trademark has been the subject of dispute.

In August 2005, Autodesk announced a "Free Trial" of a new version of the "AutoCAD LT" software, instead of its usual annual upgrade. This was the first time in at least 25 years that Autodesk offered a "free" version of AutoCAD, implying that the Free Trial version was not a paid upgrade to an existing product. The only "trial" AutoCAD LT offered was an evaluation. In July 2006, Autodesk announced the release of a new version of AutoCAD, AutoCAD 2007, free for the first six months. The announcement further stated that AutoCAD LT would be upgraded to AutoCAD 2007, but that there would be no free upgrade to AutoCAD LT. The company also planned to move away from the language of the C++ to the VBA scripting language.

Autodesk claimed that the AutoCAD 2007 line would still be updated "on an annual basis", but that this would not include "AutoCAD LT". This decision was called a "betrayal" by some users. a1d647c40b

Q: C++ Macro expansion with args/multiple args I have a macro defined as follows: #define ADD_SUB(a,b) \ int_ ## a + int_ ## b; When I call it as: ADD_SUB(i, j) With multiple arguments to ADD_SUB, I get: error: expected primary-expression before 'int_' Is there a way to make this work with multiple arguments? A: You need to expand the arguments, so that macros are expanded before the macro invocations. For example: #define ADD_SUB(a, b) \ (a) + (b) ADD_SUB(i, j) ADD_SUB(i, j) Your original code isn't really doing anything useful. In this case the macro expansion produces something that's not really useful either (well, it is, but it's not meant to be).
